INNOVATION UPDATE FROM ISRAEL IDEAS

Printer, Can You Please Make Me a Low-fat Burger with Fries?

Researchers at the Yissum Research Development Company, the technology transfer company of the Hebrew University of Jerusalem, said they have created a 3D printing technology that will be able to produce nutritious meals, for use in homes, restaurants and institutions, using nano-cellulose, a natural and edible calorie-free fiber. They have so far used their technology to "print" dough, but not a full meal.

The technology was to be presented for the first time on Wednesday at the *3D Printing and Beyond: Current and Future Trends* conference at Hebrew University, and the researchers hope it will be the basis for a product on the market within the next two to five years. The technology was developed by professors Oded Shoseyov and Ido Braslavsky, both of the Robert H. Smith Faculty of Agriculture, Food and Environment at Hebrew University.

By analyzing some key Biblical narratives ranging from the Garden of Eden through Moses' career, along with some classical and contemporary rabbinic commentaries, this series will explore Jewish perspectives on these ongoing issues.

Jewish Music and Prayer: Where have we come from and where are we going? with Hazzan Vogel

Tracing the last one hundred years of musical practice in the synagogue this class will examine the ever-evolving modes and styles of prayer from the beginning of the 20th century through the present time. Through discussion about the meaning of the prayers as well as active listening, participants will be encouraged to think critically about the musical aspects of prayer and how various melodic styles and genres work to enhance the spiritual experience.
